Public Key Infrastructure

NYRA
Your Partner in Solution

Managed Public Key Infrastructure Services provides solution for secure and authenticated communications, with data-integrity and non-repudiation protection.

NYRA is the first and only company in Indonesia to develop and working PKI system sold to PT. Telkom (i-trust) and currently operation its own PKI system (Ntrust) to support Indonesia customs Electronic Data Interchange.

Business requirements to make suppliers, partners, and customers more efficient are driving enterprises to look into ways to securely open up their networks and applications, giving rise to business partner extranets and consumer web applications.

In the past, authentication solutions have been costly and complex to deploy, resulting in limited proliferation of these solutions.

With NYRA's Ntrust, customers can move to an easier, more ubiquitous universal authentication solution that relies on Ntrust's Public Key Infrastructure Services to provide best-of-breed security for network and internet resources.
