

BubbleCode® is built on a highly secured coding system to authenticate documents and cards. It is generated through a 3-DES encryption application using a PC desktop. Verification can be done through a *Symbian* mobile phone or a desktop scanner with our BubbleCode® applications (worldwide patent pending).

Presently only Nokia mobile phone is equipped with this application and NYRA is continuing development for other brands.

BubbleCode® has already implemented by Philippines Government as instrument of identification for foreign-worker identity card.

BubbleCode® can also be used for filing and inventory system, and other identification system, such as KTP, SIM and other license or certificate instrument.
